

# Software that makes sense of sensors

How EverSmart™ technology is changing the IPM model.

The EverSmart dashboard enables PCOs to quickly spot and remedy problems.

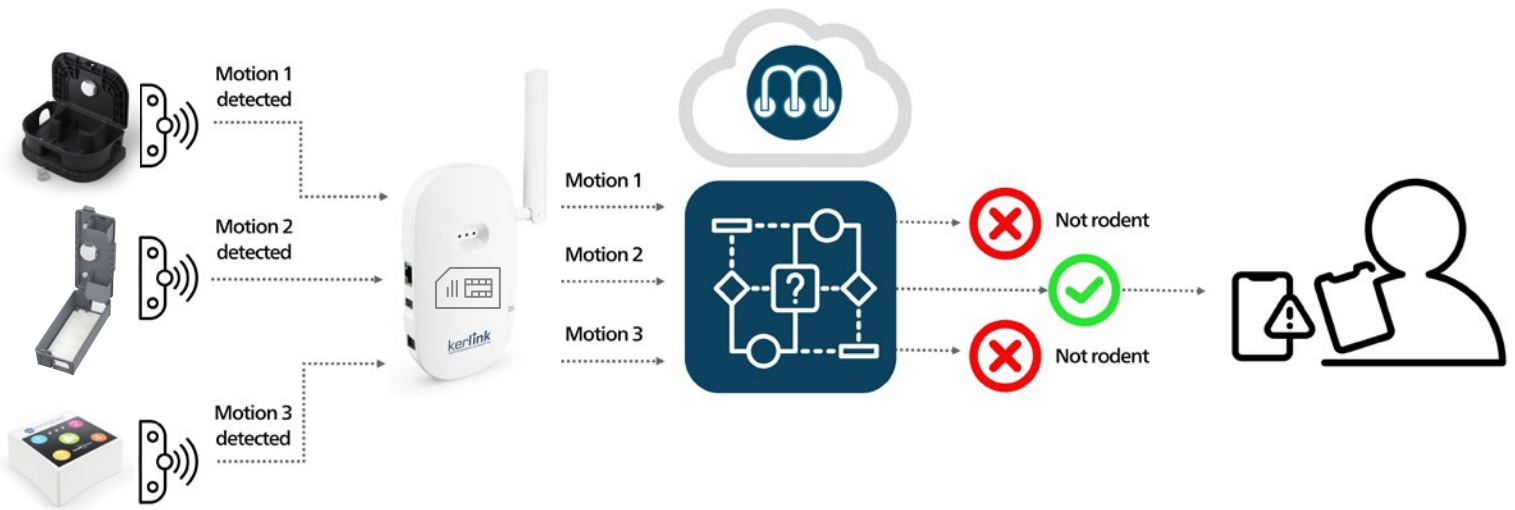

## EverSmart Rodent™: Data that does the job

LoRaWAN® enabled

1. Sensors universally adaptable to current rodent equipment and service environment
2. AI-initiated alerts versus simple alarms
3. Trap, station and area monitoring ability
4. Disruptive software, not sensor driven, service model
5. Your first step in a suite of sensor service offerings
6. SOC 2 certified & cyber resilient

# How AI/ML helps eliminate false positives

Every motion event from the sensors is reported as an alarm and recorded on the Microshare cloud.

These alarms are assessed by our AI/ML algorithm. Only those deemed likely to be rodent activity generate alerts that may require PCO intervention.

EverSmart Rodent runs on Microshare's Alert Platform that securely connects and powers its products on five continents. From hospitals and universities to airport terminals, retail outlets, warehouses, high-rise apartment buildings and NFL stadiums, the platform ensures that EverSmart meets its brand promise: **Delivering the right message to the right person at the right time.**

## SOC 2 Compliant

SOC 2 certification, proven stability and scalability mean EverSmart Rodent poses no cyber risk to clients or customers.

EverSmart Rodent works on the SOC 2 compliant Microshare Alert Platform that ensures that data remains secure throughout its journey.
