

The solutions you need for general pest and rodent infestations

Ridesco® WG

Insecticide

Ridesco® WG insecticide is ideal for active infestations of American cockroaches, black widow spiders and more. Its quick-release formulation delivers the dual-action power of dinotefuran and alpha-cypermethrin to rapidly reduce pest populations. Ideal for first-time services, cleanouts, callbacks, or achieving pest-free conditions prior to a customer's big event, **Ridesco® WG** insecticide delivers rapid, and visible results.

Selontra®

Rodent Bait

Selontra® rodent bait offers the ultimate in rapid rodent control. The active ingredient, cholecalciferol, ensures rodents only consume enough of the highly palatable bait to get a lethal dose. This stop-feed action helps maximize bait, leaving more available for other members of the colony. Selontra Rodent Bait controls infestations in as few as seven days, even against anticoagulant-resistant rodent populations.

Contact your Vesperis representative or BASF representative for more information about these solutions that tackle infestations head on.

Always read and follow label directions.
